CUSTOM PRODUCT DEVELOPMENT

# MIDI Keyboard

## Features

- 33 full size keys are easy for subjects to use with minimal adjustment from a real piano
- Standard USB MIDI interface – works with all modern operating systems (Windows, Mac, Linux) and sequencing programs (Cakewalk, etc)
- Plastic body
- Rubber springs for the best feel without ferrous metal springs
- Fixed velocity (127)
- For research use only
- Shipping weight: 15 lbs

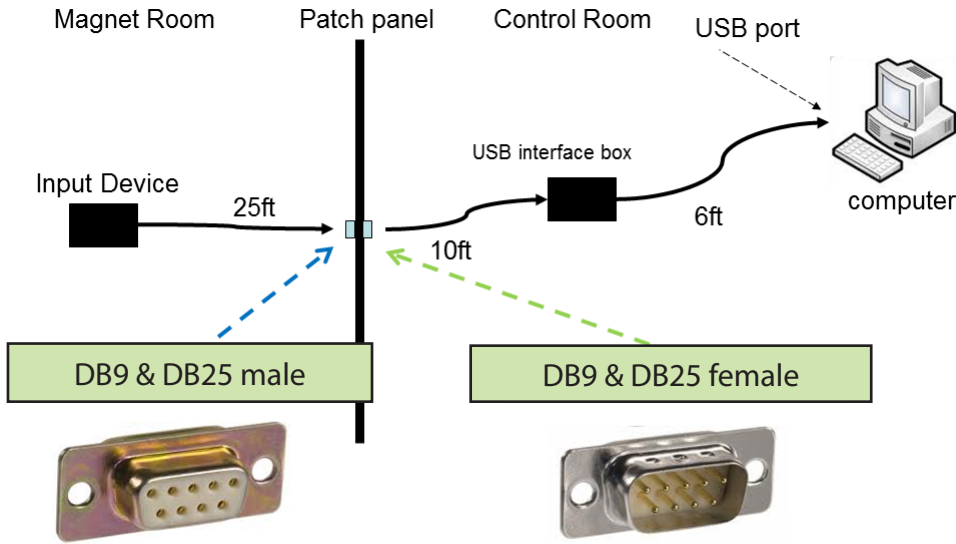

## Applications

- Research into music and the brain

## Electrical Connections

## USB Interface, Software, Dimensions

The keyboard uses a standard MIDI device driver. No synthesizing software or audio hardware is provided to generate audible sounds from the MIDI messages sent by the keyboard. We recommend that Windows users do NOT use the built in MS Synth synthesizer as it introduces latency; use the synthesizer provided by your sequencing software.
